19. Surgical Workshop On Craniofacial Deformaties Module Ii: Pediatric TMJ Ankylosis

Organized by Dept. of Oral and Maxillofacial Surgery

02nd February 2023

As a part of the surgical demonstration, a child patient with jaw joint anlylosis was operated on by in-house faculty and an invited surgeon. Because of the surgery, the child, who had not been able to open her mouth and eat so far in her life of six years, is now able to eat and speak properly.

Pediatric TM joint ankylosis is a rare but serious condition, where the jaw joints of the child patient gets fused to the bone of cranial base. Because of this the child is not able to open the mouth and is unable to eat solid food and speak properly. This in turn leads to a malnourished child, with serious physical and psychological implications.

The correction of the condition requires major yet delicate surgical intervention to remove the ankylotic mass so as to allow the patient to perform normal mouth opening and oral functions.

“Utility of costochondral graft in paediatric TMJ ankylosis”.

Dr. Nilesh Mishra discussed on above topic. Management protocol for TMJ ankylosis was discussed in depth. The utility of costochondral grafts as interposition material and its unpredictable outcome was discussed.

Dr. Anuj Dadhich (MDS, FDSRCS), Professor and , Maxillo-Facial Surgery, Rural Dental College, Loni discussed on established area of excellence and expertise in field of Oral & Maxillofacial surgery discussed about
